

Ilium Neocort general information

What is Ilium Neocort used for?

Ilium Neocort cream is a topical treatment used for dogs, cats, horses and cattle to treat skin conditions caused by bacteria that are sensitive to the antibiotic neomycin. These skin conditions include moist dermatitis, in which an initial skin irritation, which can be an insect bite, skin allergy or laceration, causes the animal to scratch so that the skin becomes red and inflamed turning into a moist open wound due to constant scratching and biting of the skin. Ilium Neocort cream combines antibiotic, anti-inflammatory and anaesthetic effect to help remove the pain and irritation of the skin lesion so that it can heal.

How does Ilium Neocort work?

Ilium Neocort cream contains a combination of ingredients used to treat inflammatory skin conditions in animals that become infected. Neomycin in Ilium Neocort cream is an antibiotic that is commonly used in creams and ointments and is used to kill a wide range of bacteria that cause skin infections, by inhibiting bacterial protein synthesis. Lignocaine in Ilium Neocort cream is a local anesthetic that is used in topical creams to relieve itching, burning and pain caused by inflammation in skin and acts by blocking transmission of sensory signals and inducing numbness to the area of skin where it is applied, so that the urge to scratch is reduced. Hydrocortisone in Ilium Neocort cream is a synthetic corticosteroid hormone with actions similar to cortisol that is produced by the adrenal glands, and works by reducing the body's response to inflammation. The combined ingredients in Ilium Neocort cream help reduce the redness and soreness caused by an inflammatory skin condition as well as treating bacterial infection.

What does Ilium Neocort contain?

Ilium Neocort contains the active ingredients lignocaine 20mg/g, neomycin 5mg/g, hydrocortisone 5mg/g in a tube of 50g cream.

Treating skin conditions in animals with Ilium Neocort

Ilium Neocort cream contains a combination of ingredients used to treat inflammatory skin conditions in animals that become infected. It is a topical treatment containing the antibiotic neomycin to kill sensitive bacteria; a local anesthetic lignocaine to induce numbness to the area of skin where it is applied; and hydrocortisone to reduce the response to inflammation. Ilium Neocort cream is used for dogs, cats, horses and cattle to treat skin conditions including, moist dermatitis, in which an initial insect bite, skin allergy or laceration causes the animal to scratch so that the skin becomes inflamed and infected, turning into a moist open wound due to constant scratching and biting of the skin. Ilium Neocort cream combines antibiotic, anti-inflammatory and anaesthetic effect to help remove the pain and irritation of the skin lesion so that it can heal.

When should you apply Ilium Neocort to your animals skin?

You should not use Ilium Neocort cream if your animal shows any allergic or sensitivity reaction to lignocaine, neomycin or hydrocortisone or any ingredients in Ilium Neocort.
